

Ask a **KDT** owner...

KDT KN2 CNC Flat Bed. KDT365 Edgebander

“Speed and quality - we’re very happy ”

TS Cabinets owner Sam Tsakirooulos classify’s himself as an old school 3rd generation Cabinetmaker. By this he means priding himself on the fit, finish, customisation, meticulous approach and quality of his cabinetry and the loyalty he has built with his clients through this.

When deciding on a CNC and Edgebander the ability of the machines to ensure TS Cabinets deliver these perfect results while increasing production substantially were key factors. “We also wanted top value for money with great local backup. All our equipment is from Peter at Leda Machinery for these reasons and obviously the latest purchases show we have been very happy”

Starting with the KDT365 Edgebander Sam comments “This machine is great, no chipping, no excess glue, no issues at all” And it’s very productive. “At the high speed setting it’s too fast for one person but if we are meeting a deadline then we have someone tailing out and run at 23m/min, job done, and its all simple with the touch screen.”

The KDT KN2 Flat Bed is also now key to delivering great results on time for TS Cabinets. “We can easily manufacture 2 kitchens a day as we now cut, drill and edge in one third of the time, no chipping, everything perfect.”

A simple outfeed table means the KDT’s auto nest push off and sacrifice sheet cleaning system is a big productivity booster too. “When we went to the LEDA in-house demo the KDT made a great first impression. We’ve been using woodworking machinery for a long time now and you know a good machine when you see one. Plus I could see features on it to make our job easy. The auto push off and auto tool measuring systems were great examples.”

Thanks to the automatic switching across of the extraction from Router to Drills to Table cleaning the low extraction air volume required was a bonus. “We didn’t need to add an expensive high volume extractor.”

In summary - the KDT KN2 has exceeded expectations. “It’s a bit of a learning curve switching across to a CNC but it’s now the key to delivering perfect jobs on time, time after time with the bonus of being able to easily customise to suit clients. We’re very happy with our KDT’s”
