

KDT KN2 CNC, 365 Premill Edger and Panelsaw

“Our innovative system demands efficiency”

Jack Kenyon brings 50 years of Cabinet Industry experience to the industry - and an innovative approach.

No Fuss focus on supplying RTA cabinets to the trade - alongside allied components like tops and levels of appliance packages if required.

Innovative, clever and comprehensive in-house software is available on-line to Cabinet makers that makes specifying, ordering very fast and simple - and delivers comprehensive product graphics and pricing info for the selected package.. But at No Fuss, local Tradespeople can process their own orders on the No Fuss equipment or have Jacks in-house Cabinet makers prepare it for them. From there they can choose self assembly or assembled, self install or installed - so its a very flexible system ideally matched to their Trades customers individual requirements and preferences

‘We take this even further by offering a complete Cabinet workshop package to Cabinet-makers throughout Australia backed by our Cabinet Design software and business management packages. No matter where you are located you can benefit from the experience and systems we have developed at whatever level you prefer - sales and design support only, cabinet supply or self-manufacture and the same for installation. We feel its a very innovative and flexible package and a unique one in the Cabinet industry.’

When it came to choosing the equipment for their own workshop Jack did his homework in his typical thorough way. “First I went to AWISA and had a good look at my options. KDT impressed me with its solid construction and clever design. Next I spoke to KDT owners who were very positive in their endorsement of the machines and backup from LEDA. And finally I talked to independent Service Techs who I have used and trust - and again KDT was given a big thumbs up for both value and reliability. LEDA offered me some innovative Finance solutions too - much better than my Bank and something I appreciated.”

The first of the new KN2409DE CNC’s was followed with a KDT365 Premill Edgbander and Panelsaw and all have lived up to expectations. ‘The heavy weight design approach and evident quality I first saw at AWISA has paid off on the factory floor. Accuracy, cut and edge quality are terrific and I also like having a locally based LEDA Service Manager who you know by name and can talk to directly when we need any advice or help. Simple and effective!’

In summary - the KDT has exceeded expectations at No Fuss “We need to produce high quality work and be very flexible to suit our Trade customers requirements. We’ve set ourselves a tough task but with KDT equipment I know we can deliver terrific cabinets on time and very competitively. I’m happy with my decision to partner with KDT.
